EMERGENCY OPS

Disaster-proof public safety center can change from classrooms to an EOC in an instant.

BY JIM STOKES

Mother Nature doesn't always give us blue skies and gentle April showers. Along with May flowers, we may get bizarre combinations of spring-time floods and summer tornadoes. Furthermore, autumn sometimes brings more than a kaleidoscope of colorful falling leaves and, of course, we shouldn't forget about winter blizzards and other weather hazards. Witness to the awesome side of our environment was the horrific Hurricane Sandy that struck the eastern seaboard this past fall. Thus, we have to be ready to encounter disasters.

Consequently, emergency preparedness extends all across the US.

That brings us to our subject, the AV design and integration for a "bunker" that houses the Greene County Office of Emergency Management (OEM) (www.greenecountymo.org) and the 911 call center for Springfield MO.

There was good reason to erect this brand new three-story, disaster-proof building with its hardened and tornado-proof missile-impact rated windows. It's situated near an earthquake fault line in Tornado Alley. Furthermore, it's a large facility with the capability of handling communications for a five- to six-state regional disaster area. We'll cover the spe-

cific needs for a new facility and its AV aspects later. Most recently, the southwest Missouri incident support team used its skills to aid in Hurricane Sandy's recovery (see sidebar, "Hurricane Sandy Deployment").

Redesign

The project's original design was attributed to Jim Landis, TLP Engineering, Orlando FL (www.tlc-engineers.com). However, local integrator Killian Digital in Springfield (www.killiandigital.com) did a "fair amount of redesign," according to President Spencer Cox. "We had to do some redesign based on

Sound & Communications Contributing Editor Jim Stokes has been involved in the AV industry as an AV technician and writer for more than 30 years.

The training classroom features two large rear-projection images and six 55-inch monitors. This room can convert to a multi-agency coordination center in event of a large disaster response.

The Ops Floor becomes central command during a disaster response, displaying more than 30 individual video or data sources."

newer technology that was available and changes to the requirements," explained Cox. "We didn't change the foundation of the design. We tried to accommodate new technology." Cox noted that Brent Early held a very key position in the install as Killian's lead engineer.

"From a personal standpoint, it was rewarding to work on this project because it affects the safety of our community," said Killian's Cox. "The technicians and everyone else in our company felt like they had a vested interest in making this a successful

project because it directly affects the safety of our community and our families. If a wire comes loose from a 911 operator's telephone, that could affect us all. This is the first emergency management center we've done. And there aren't very many of this kind of complex in the nation, so this one is special."

Cox noted that building construction began in March 2011, with the integrator starting onsite with preliminary work, as well, refining the designs and making sure the shop drawings were complete. Onsite AV

installation began in January 2012, and the client moved into the building in mid-July.

Here's a perspective from inside the OEM with Larry Woods, Assistant Director of Emergency Management for the city of Springfield and Greene County MO, and Ty Davison, the organization's Training and Exercise Specialist. Regarding the specific need for a new, from-the-ground-up facility, Woods explained, "We were living in an antiquated building, well over 100 years old. It had never been designed for its cur-

County officials address the media in the press conference briefing room where two 55-inch displays behind the lectern allow the presenter to bring up data or images.

Hurricane Sandy Deployment

Members of the Springfield-Greene County Missouri OEM (Office of Emergency Management) were deployed to aid with recovery and relief in Nassau County, Long Island NY) after Hurricane Sandy in November 2012. An example of one of the hardest hit areas was the City of Long Beach, where the lawns and streets were embedded in sand. At the request of the State of New York OEM, the Southwest Missouri Region D Incident Support Team (IST) was on the scene. The team was comprised of members from 18 counties in southwest Missouri, who provide discipline-specific support, including logistics, planning, operations and other functional assets, based on the needs of the local emergency operation center's jurisdiction.

"It's interesting that we had most of our staff responding to Hurricane Sandy," said Larry Woods, Assistant Director of Emergency Management for the City of Springfield and Greene County MO. "Ty Davisson [the organization's training and exercise specialist] and I are with a federal agency, and we were deployed as far as the federal response. However, we had the rest of our staff deployed as part of our regional incident support team. They were actually staged for two weeks in Nassau County, and they assisted those folks at the local level to get their community up and running again."

AV played a significant role in the mission. "Our team put to use the videowall system in their local Ops center for status boarding, among other tasks. Our team was able to develop uses for status boards the local Ops never used before. They were just blown away with that ability and were very happy. So I think they're going to build on that for future activations."

rent use. So, over a 10-year timespan, we started planning for a new facility, without really having any funding in place."

Therefore, it took planning and persistence to make the Center happen. "We just started the planning

process and kept that going," Woods explained. "Over time, we were able to realize some grants and develop relationships and interest from our elected officials to pursue the building of our new facility. It was not so much state funding. We had about \$4
